

## Greenhouse Gas Emissions in 2022

GAC's direct (Scope 1) greenhouse gas emissions are associated with the use of diesel for vehicles.

GAC's direct (Scope 1) greenhouse gas emissions are associated with the use of diesel for vehicles, plant, equipment and electrical generation. Scope 1 emissions measured 73,618 tCO<sub>2</sub>-eq for the year 2022.

We are not connected to the national electricity grid nor do we contribute to any Scope 2 emissions.

Indirect, Scope 3 emissions are generated from rail transport of ore between the Mine and Port, and business air travel. Scope 3 emissions for the year 2022, measured 9,584 tCO<sub>2</sub>-eq.
