

Greenhouse Gas Emissions in 2023

GAC's direct (Scope 1) greenhouse gas emissions are associated with the use of diesel for vehicles, plant, equipment and electrical generation. Scope 1 emissions measured 78,463 tCO₂-eq for the year 2023.

We are not connected to the national electricity grid nor do we contribute to any Scope 2 emissions.

Indirect, Scope 3 emissions are generated from rail transport of ore between the Mine and Port. Scope 3 emissions for the year 2023, measured 97,197 tCO₂-eq.

78,463 Direct (Scope 1) greenhouse gas emissions (tCO₂e)
