

Greenhouse Gas Emissions in 2019

GAC's direct (Scope 1) greenhouse gas emissions are predominantly associated with the use of diesel for vehicles, equipment and electrical generation. Scope 1 emissions measured 27,382.25 tCO₂eq for the year 2019 and 32,055 tCO₂eq for the period 1 July 2019 (FOOS) to 30 June 2020.

We are not connected to the national electricity grid nor do we contribute to any Scope 2 emissions.

Indirect, Scope 3 emissions are generated through ore barging and transshipping, rail transport of ore between the Mine and Port, procurement of goods and business air travel. Scope 3 emissions for the reporting period 1 July 2019 (FOOS) to 30 June 2020 measured 1,380 tCO₂eq.
